Art Unit: 1732

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, drawn to a method of forming integrated multiple optical elements, classified in class 156, subclass 275.5.
- II. Claims 15-30 and 41-47, drawn to a method of making optical elements on a wafer, classified in class 264, subclass 2.7.
- III. Claims 31-40 and 48-50, drawn to a diffractive optical element, classified in class 359, subclass 565.

The inventions are independent or distinct, each from the other because:

Inventions I/II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by other processes such as casting and adhering elements together to arrive at the desired optical element and would not require the lithographic steps required in the method claims.

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have different modes of operation, since the aligning and bonding of separate wafers called for in Group I claims is not required for the lithographic processing and embossing of Group II claims and vice versa.

Art Unit: 1732

This application contains claims directed to the following patentably distinct species: Should applicant elect Group III, the following species have been identified:

Group A, claims 31-36 and 48-50, that directed to a substrate with many optical elements thereon;

Species B, claims 37 and 38, that directed to diced/single optical elements; and

Species C, claims 39 and 40, that directed to a hybrid optical element. The species are independent or distinct because of the reasons noted in the breakdown supra.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).
